

LVD TEST REPORT

# CE-LVD TEST REPORT

#### Prepared for:

LawMate International Co., Ltd. 3F, No.34, Lane 60, Wenhu St., Taipei, Taiwan

**Product: Smartphone Design DVR** 

Trade Name: LawMate

Model Name: PV-900EVO3, Q-PV-900EVO3

Date of Test: Nov. 25, 2019 to Dec. 02, 2019

Date of Report: Dec. 02, 2019

Report Number: HK1912023056-SR

# **Prepared By:**

Shenzhen HUAK Testing Technology Co., Ltd.

1F, B2 Building, Junfeng Zhongcheng Zhizao Innovation Park, Heping Community,

Fuhai Street, Bao'an District, Shenzhen, China

# TEST REPORT IEC 62368-1

# Audio/video, information and communication technology equipment Part 1: Safety requirements

Report Number.....: HK1912023056-SR

Date of issue .....: 2019-12-02

Total number of pages.....: 64

Applicant's name ...... LawMate International Co., Ltd.

Address....... 3F, No.34, Lane 60, Wenhu St., Taipei, Taiwan

Test specification:

Standard ...... EN 62368-1:2014+A11:2017

Test procedure....: CE-LVD

Non-standard test method .....: N/A

Test Report Form No.....: IEC62368\_1B

IEC62368\_1B

Page 8 of 64 Report No.: HK1912023056-SR

#### **ENERGY SOURCE IDENTIFICATION AND CLASSIFICATION TABLE:**

(Note 1: Identify the following six (6) energy source forms based on the origin of the energy.)

(Note 2: The identified classification e.g., ES2, TS1, should be with respect to its ability to cause pain or injury on the body or its ability to ignite a combustible material. Any energy source can be declared Class 3 as a worse case classification e.g. PS3, ES3.

#### **Electrically-caused injury (Clause 5):**

(Note: Identify type of source, list sub-assembly or circuit designation and corresponding energy source

classification)

Example: +5 V dc input ES<sup>2</sup>

| Source of electrical energy | Corresponding classification (ES) |  |
|-----------------------------|-----------------------------------|--|
| All source                  | ES1                               |  |

#### Electrically-caused fire (Clause 6):

(Note: List sub-assembly or circuit designation and corresponding energy source classification)

Example: Battery pack (maximum 85 watts): PS2

| Source of power or PIS | Corresponding classification (PS) |
|------------------------|-----------------------------------|
| All source             | PS1                               |

#### Injury caused by hazardous substances (Clause 7)

(Note: Specify hazardous chemicals, whether produces ozone or other chemical construction not addressed as part of the component evaluation.)

Example: Liquid in filled component Glycol

| Source of hazardous substances | Corresponding chemical |        |
|--------------------------------|------------------------|--------|
| N/A                            | LAK ES.                | LAKTES |

#### Mechanically-caused injury (Clause 8)

(Note: List moving part(s), fan, special installations, etc. & corresponding MS classification based on Table 35.)

Example: Wall mount unit

MS2

| Source of kinetic/mechanical energy | Corresponding classification (MS) |
|-------------------------------------|-----------------------------------|
| Sharp edges and Comers              | MS1                               |
| Equipment mass (<7kg)               | MS1                               |

#### Thermal burn injury (Clause 9)

(Note: Identify the surface or support, and corresponding energy source classification based on type of part, location, operating temperature and contact time in Table 38.)

Example: Hand-held scanner – thermoplastic enclosure TS

| Source of thermal energy | Corresponding classification (TS) |
|--------------------------|-----------------------------------|
| All source               | TS1                               |

#### Radiation (Clause 10)

(Note: List the types of radiation present in the product and the corresponding energy source classification.) Example: DVD – Class 1 Laser Product RS1

| Type of radiation | Corresponding classification (RS) |
|-------------------|-----------------------------------|
| LED, Voice        | RS1                               |

#### **ENERGY SOURCE DIAGRAM**

Indicate which energy sources are included in the energy source diagram. Insert diagram below

# Supplementary Information:

#### Notes:

- [1] Supply voltage is the anticipated maximum Touch Voltage
- [2] Earthed neutral conductor [Voltage differences less than 1% or more]
- [3] Specify method used for measurement as described in IEC 60990 sub-clause 4.3
- [4] IEC60990, sub-clause 6.2.2.7, Fault 7 not applicable.
- [5] (\*) IEC60990, sub-clause 6.2.2.2 is not applicable if switch or disconnect device (e.g., appliance coupler) provided.

Supplementary information:

An Arcing PIS requires a minimum of 50 V (peak) a.c. or d.c. An Arcing PIS is established when the product of the open circuit voltage  $(V_p)$  and normal operating condition rms current  $(I_{rms})$  is greater than 15.

|           |  | HAKTESTIL  |  | NAK TEST  |  |                             |

#### Supplementary Information:

A combination of voltmeter, VA and ammeter IA may be used instead of a wattmeter.

If a separate voltmeter and ammeter are used, the product of (VA x IA) is used to determine Resistive PIS classification.

A Resistive PIS: (a) dissipates more than 15 W, measured after 30 s of normal operation, <u>or</u> (b) under single fault conditions has either a power exceeding 100 W measured immediately after the introduction of the fault if electronic circuits, regulators or PTC devices are used, or has an available power exceeding 15 W measured 30 s after introduction of the fault.

|---------|---|----------------------|--|
| Clause  | Requirement + Test  | Result - Remark      | Verdict  |
| 5.7.6.1 | Norway and Sweden   | a G                  | N/A  |
|         | To the end of the subclause the following is added:   | AK TESTINE           | AKTESTING  |
|         | The screen of the television distribution system is normally not earthed at the entrance of the building and there is normally no equipotential bonding system within the building. Therefore the protective earthing of the building installation needs to be isolated from the screen of a cable distribution system.                         | WHITESTING HAVE      | A LIE LINE   |
|         | It is however accepted to provide the insulation external to the equipment by an adapter or an interconnection cable with galvanic isolator, which may be provided by a retailer, for example.  | O HUAN TESTING       | WKTESTING (  |
|         | The user manual shall then have the following or similar information in Norwegian and Swedish language respectively, depending on in what country the equipment is intended to be used in:  | O HILL               |  |
|         | "Apparatus connected to the protective earthing of the building installation through the mains connection or through other apparatus with a connection to protective earthing – and to a television distribution system using   | MANAY TESTING        | NAKTESTIL  |
|         | coaxial cable, may in some circumstances create a fire hazard. Connection to a television distribution system therefore has to be provided through a device providing electrical isolation below a certain frequency range (galvanic isolator, see EN 60728-11)"  | O HURK TESTING O HUR | KTE TING   |
|         | NOTE In Norway, due to regulation for CATV-installations, and in Sweden, a galvanic isolator shall provide electrical insulation below 5 MHz. The insulation shall withstand a dielectric strength of 1,5 kV r.m.s., 50 Hz or 60 Hz, for 1 min.   | MARTES THE           | HUNTESTING (   |
|         | Translation to Norwegian (the Swedish text will also be accepted in Norway):  |                      |  |
|         | "Apparater som er koplet til beskyttelsesjord via<br>nettplugg og/eller via annet jordtilkoplet utstyr – og er<br>tilkoplet et koaksialbasert kabel-TV nett, kan forårsake<br>brannfare. For å unngå dette skal det ved tilkopling av<br>apparater til kabel-TV nett installeres en galvanisk<br>isolator mellom apparatet og kabel-TV nettet." | HUAN TESTING         | LAN TESTING  |
|         | Translation to Swedish:   | AUH W                | The state of the s |
|         | "Apparater som är kopplad till skyddsjord via jordat vägguttag och/eller via annan utrustning och samtidigt är kopplad till kabel-TV nät kan i vissa fall medföra risk för brand. För att undvika detta skall vid anslutning av apparaten till kabel-TV nät galvanisk isolator finnas mellan apparaten och kabel-TV nätet."                     | O HUAK TESTING       | HUNTESTING (   |
| 5.7.6.2 | Denmark   |                      | N/A  |
|         | To the end of the subclause the following is added: The warning (marking safeguard) for high touch current is required if the touch current or the protective current   | MAKTESTING           | MAKTESTING   |
|         | exceed the limits of 3,5 mA .   | -niG                 |  |
